

Vinícius Albuquerque

vini.alb13@gmail.com · +55 27 99201-0432 · Vila Velha, Espírito Santo, Brazil

Professional summary

Senior software engineer with 6+ years of experience leading the development of high-performance web and mobile applications. Strong in JavaScript, React, and TypeScript across the full stack—from frontend (React Native, ReactJS, NextJS) to backend (Go, Node.js, PHP).

I excel at building complex features such as interactive dashboards and real-time chat systems. I mentor teams and manage end-to-end app store deployment. Motivated problem-solver, comfortable in fast-paced environments.

Skills

Languages & markup: JavaScript, TypeScript, HTML, CSS, Go

Frontend: React, Next.js, React Native, SolidJS

Backend & realtime: Node.js, NestJS, Prisma, PostgreSQL, Redis

Platform & ops: Git, Docker, AWS, GitHub Actions

Other: REST APIs, AI-assisted development (Cursor, Claude, Antigravity), testing (Vitest, Jest, React Testing Library, Cypress, Playwright), Turborepo, pnpm

Experience

Founder & Lead Developer — Path Trader (Independent Project)

Feb 2026 – Present

As the founder and lead developer of Path Trader, an independent self-funded platform, I designed and built a TypeScript monorepo for traders to journal trades, review performance, manage risk, and run a partner program. Developed primarily in my free time, I owned both the Next.js client applications and the NestJS API—from data modeling with Prisma through payments, file storage, realtime notifications, and production-oriented tooling.

- Architected a pnpm and Turborepo monorepo with a shared Prisma schema, internal UI packages (Radix-style primitives, Recharts), and multiple Next.js surfaces (main app, marketing site, admin, landing).
- Delivered the core product: trading journal (accounts, trades, tags, strategies, emotions) plus imports from common broker and export formats.
- Built analytics and performance views (path-rank style metrics) so users can interpret results beyond raw logs.
- Implemented journal and documents with Lexical rich text, folders, and document types for structured note-taking alongside trades.
- Integrated subscriptions and billing with Asaas (Brazil-focused payments) and supporting account lifecycle flows.
- Shipped a partner program (referrals, levels, cashback, payout requests) with an admin app for operational review and approvals.
- Added an AI assistant (OpenAI) with usage-aware behavior suitable for production SaaS.
- Implemented authentication with NextAuth.js on Next apps and JWT plus Passport on the API for a consistent security model across clients.
- Connected realtime in-app notifications via Pusher, transactional email via AWS SES, and file uploads using presigned S3 URLs.
- Built backend capabilities in NestJS with validation, throttling, scheduled work, and BullMQ on Redis for asynchronous jobs.
- Delivered a PWA on the main web app with Serwist for offline or shell behavior and installability.
- Applied observability with Sentry across Next.js and Node services to improve diagnosability in production.
- Implemented automated quality gates with Jest, React Testing Library, and Playwright end-to-end tests for critical user flows.
- Established CI/CD on GitHub Actions (lint, type-check, unit tests, Playwright E2E across web, admin, site, and API), gated on pull requests to main and develop.
- Automated deployments on pushes to main and develop with path filters so only affected apps (API, web, site, admin, landing page) and shared packages trigger the relevant deploy.
- Operational automation: scheduled database backups to S3 and a daily develop → main sync workflow that opens pull requests and coordinates checks before merge.
- Leveraged AI-driven development workflows using tools like Cursor, Claude, and Antigravity to rapidly prototype, iterate, and accelerate the project's time-to-market.

Frontend Engineer — Bird

Apr 2024 – Present

As a frontend engineer at Bird, I collaborate closely with designers to deliver highly accessible interfaces while actively expanding my full-stack impact through backend development in Go. On the sales development team, I drive end-to-end feature delivery for lead, opportunity, and account management.

- Developed and maintained Go-based API endpoints, handling core business logic for the sales development team and improving system stability.
- Architected a custom analytics engine and cross-app dashboard using Malloy, SolidJS, and Vega, empowering users to dynamically compose charts based on selected metrics.
- Led the frontend redesign of the marketing cloud, establishing a scalable component system with Radix UI and Tailwind CSS.
- Implemented complex data visualization UIs across the product suite utilizing TanStack Table, Recharts, and Chart.js.
- Championed quality assurance by establishing rigorous automated testing workflows with Vitest, React Testing Library, and Playwright.

Senior Software Engineer — MULTTI (Tecnologia e Integrações)

Jan 2022 – Mar 2024

As a senior software engineer at MULTTI, I took on a technical leadership role, guiding the engineering team, streamlining workflows, and contributing hands-on across the stack (React/React Native frontends and PHP backends).

- Mentored junior engineers and optimized agile development workflows to ensure reliable feature delivery.
- Architected and built a highly interactive real-time chat system using React, PusherJS, WebSockets, and virtualized lists for performance at scale.
- Led the end-to-end development of a delivery-tracking React Native mobile app featuring live maps, push notifications, and custom UI.
- Developed comprehensive full-stack solutions, including a lead management system (React, MUI) and a financial market streaming platform.

- Modernized the CI/CD pipeline and infrastructure by introducing Docker, AWS, and Bitbucket Pipelines, reducing deployment friction.
- Managed the full lifecycle of mobile applications, including automated deployments to Google Play and the App Store.

Software Engineer — Solution4apps

Jan 2020 – Jan 2022

As a software engineer at Solution4apps, I led the technical delivery of multiple web and mobile projects, taking ownership from initial discovery through to production release.

- Engineered a feature-rich React Native mobile app incorporating interactive maps, real-time camera processing, push notifications, and NativeWind.
- Built a responsive, real-time financial markets platform using Next.js, Socket.io, Chakra UI, and React Spring.
- Delivered a highly performant and accessible public-sector web application leveraging Next.js and Tailwind CSS.
- Oversaw end-to-end project execution, configuring infrastructure and managing app store deployments for mobile products.

Certifications

- Docker course — Full Cycle (088ac69a-c05f-4aa4-bad8-1c3af72085f)

Education

Expected Jun 2028 — Bachelor's, Information Systems — Universidade Vila Velha (UVV)

Aug 2021 — Specialization: Next.js, React, React Native, TypeScript — Rocketseat

Aug 2021 — Specialization: React Native, React — Fábrica de aplicativos

Feb 2020 — Specialization: HTML + CSS — UpInside Treinamentos
