Professional summary

Senior software engineer with 6+ years of experience leading the development of high-performance web and mobile applications. Strong in JavaScript, React, and TypeScript across the full stack—from frontend (React Native, ReactJS, NextJS) to backend (Go, Node.js, PHP).

I excel at building complex features such as interactive dashboards and real-time chat systems. I mentor teams and manage end-to-end app store deployment. Motivated problem-solver, comfortable in fast-paced environments.

Skills

Languages & markup: JavaScript, TypeScript, HTML, CSS, Go Frontend: React, Next.js, React Native, SolidJS Backend & realtime: Node.js, NestJS, Prisma, PostgreSQL, Redis Platform & ops: Git, Docker, AWS, GitHub Actions Other: REST APIs, AI-assisted development (Cursor, Claude, Antigravity), testing (Vitest, Jest,

React Testing Library, Cypress, Playwright), Turborepo, pnpm

Experience

Frontend Engineer — Bird

Apr 2024 – Jun 2026

As a frontend engineer at Bird, I shipped across four major product areas — analytics, marketing cloud, sales, and the public website — working closely with designers to deliver accessible, high-performance interfaces while expanding my full-stack impact through backend development in Go.

- Architected a no-code custom dashboard builder (Malloy, SolidJS, Vega) that lets users compose their own queries by adding and removing fields, then visualize them as line, bar, doughnut and funnel charts, tables, or KPIs — with drag-and-drop reordering plus inline edit, clone, and delete of every widget.
- Optimized that dashboard to render datasets of 1M+ records for enterprise clients without sacrificing interactivity.
- Built the sales suite end to end — lead boards, lead configuration, and opportunity and deal management — for the sales development team.
- Designed a custom objects system allowing users to define their own attributes on leads and opportunities, including a dynamic form layer that renders masked, format-aware inputs (monetary, numeric, email, text, and more) from each field's configuration.
- Led the frontend redesign of the marketing cloud, rebuilding tables, charts, KPIs, stepper wizards, tabs, lists, pagination, and entire pages against Figma specs on a scalable component system with Radix UI and Tailwind CSS.
- Designed and delivered the analytics visualizations for Inbox Reports, translating a large set of inbox performance metrics into charts, tables, and KPI surfaces.
- Implemented complex data visualization UIs across the product suite using TanStack Table, Recharts, and Chart.js.
- Partnered with design to launch the new bird.com — a motion-rich marketing site — and drove SEO and LLM-discoverability work, shipping Markdown mirrors of the docs, llms-full.txt, and related structured-content improvements.
- Developed and maintained Go-based API endpoints, handling core business logic for the sales development team and improving system stability.
- Championed quality assurance by establishing rigorous automated testing workflows with Vitest, React Testing Library, and Playwright, covering features with both unit and end-to-end tests.
- Accelerated delivery across all of the above with AI-assisted development workflows using Cursor, Claude, and Antigravity.

Senior Software Engineer — MULTTI (Tecnologia e Integrações)

Jan 2022 – Mar 2024

As a senior software engineer at MULTTI, I took on a technical leadership role, guiding the engineering team, streamlining workflows, and contributing hands-on across the stack (React/React Native frontends and PHP backends).

- Mentored junior engineers and optimized agile development workflows to ensure reliable feature delivery.
- Architected and built a highly interactive real-time chat system using React, PusherJS, WebSockets, and virtualized lists for performance at scale.
- Led the end-to-end development of a delivery-tracking React Native mobile app featuring live maps, push notifications, and custom UI.
- Developed comprehensive full-stack solutions, including a lead management system (React, MUI) and a financial market streaming platform.
- Modernized the CI/CD pipeline and infrastructure by introducing Docker, AWS, and Bitbucket Pipelines, reducing deployment friction.
- Managed the full lifecycle of mobile applications, including automated deployments to Google Play and the App Store.

Software Engineer – Solution4apps

Jan 2020 – Jan 2022

As a software engineer at Solution4apps, I led the technical delivery of multiple web and mobile projects, taking ownership from initial discovery through to production release.

- Engineered a feature-rich React Native mobile app incorporating interactive maps, real-time camera processing, push notifications, and NativeWind.
- Built a responsive, real-time financial markets platform using Next.js, Socket.io, Chakra UI, and React Spring.
- Delivered a highly performant and accessible public-sector web application leveraging Next.js and Tailwind CSS.
- Oversaw end-to-end project execution, configuring infrastructure and managing app store deployments for mobile products.

Certifications

- Docker course – Full Cycle (088ac69a-c05f-4aa4-bad8-1c3af72085f)

Education

Expected Jun 2028 — Bachelor's, Information Systems — Universidade Vila Velha (UVV)

Aug 2021 — Specialization: Next.js, React, React Native, TypeScript — Rocketseat

Aug 2021 — Specialization: React Native, React — Fábrica de aplicativos

Feb 2020 — Specialization: HTML + CSS — UpInside Treinamentos

Dec 2016 — High school diploma — Faculdade Projeção
